 Margin of error: +/-4.2%.

Housing Taskforce Support Grid — A proposal modeled on policies from some communities that have made it easier to build smaller home types like duplexes, triplexes, fourplexes and townhomes. The proposal would allow these smaller homes types - duplexes, triplexes, fourplexes, and townhomes - to be built on all residential lots in larger cities in Minnesota, and duplexes and townhomes to be built on all residential lots in suburban and rural Minnesota.

A Minnesota state housing taskforce and national experts have estimated we need 50,000 - 100,000 new homes to meet our housing needs. In light of this, the state legislature is considering the following proposals, for each, please say whether you [support or oppose] the proposal:

	Total	Age				Gender		Education		Race			
		18-34	35-49	50-64	65+	Man	Woman	Less than college	College	White	Black	Hispanic	Other

Housing Taskforce Support Grid — A proposal to incentivize builders to create regulated affordable housing and homes with lower carbon footprints. The proposal would allow more homes to be built on the same lot than would otherwise be permitted if they are affordable to low and middle income families or if they are extremely energy efficient.

A Minnesota state housing taskforce and national experts have estimated we need 50,000 - 100,000 new homes to meet our housing needs. In light of this, the state legislature is considering the following proposals, for each, please say whether you [support or oppose] the proposal:

Housing Taskforce Support Grid — A proposal that would allow all property owners in Minnesota to add small homes – sometimes called “accessory dwelling units,” “backyard cottages,” or “granny flats” – to all residential properties.

A Minnesota state housing taskforce and national experts have estimated we need 50,000 - 100,000 new homes to meet our housing needs. In light of this, the state legislature is considering the following proposals, for each, please say whether you [support or oppose] the proposal:

Number of Houses per Lot – taskforce_lot_number_scale

A Minnesota state housing taskforce and national experts have estimated we need 50,000 - 100,000 new homes to meet our housing needs. In light of this, the state legislature is considering allowing more homes to be built on plots of land in residential neighborhoods. In your opinion, how many homes should it be legal to build on a standard lot in a residential neighborhood?

Taskforce Proposal Joint Support

A Minnesota state housing taskforce and national experts have estimated we need 50,000 - 100,000 new homes to meet our housing needs. In light of this, the state legislature is considering a proposal that, in cities across Minnesota, would: Allow apartment buildings to be built in areas primarily zoned for retail, offices, and other commercial uses. Allow apartment buildings in areas zoned for commercial, mixed use, and multifamily housing to be approved by city planning staff if they meet set criteria outlined by the City without requiring a special vote from city council or a public hearing. Generally speaking, do you support or oppose this proposal?

Change Environmental Rights Act Support

Opponents of new housing in Minnesota recently won a victory in court requiring costly environmental review of city comprehensive housing plans. The state legislature is considering a proposal to make changes to the Minnesota Environmental Rights Act to clarify that environmental review requirements are meant to apply only to individual building projects and that comprehensive plans on housing - and housing only - can be adopted through a standard public engagement process and without additional reviews. This proposal would allow for city comprehensive plans to be implemented at their normal speed rather than face additional delays. Generally speaking, do you [support or oppose] this proposal?

Minnesota Housing Survey: Base Sample

Online sample of 820 voters fielded from April 04 to April 14, 2024.
Margin of error: +/-4.2%.

This survey is based on 820 interviews conducted by YouGov on the internet of registered voters in Minnesota. The sample was weighted according to gender, age, race/ethnicity, education based on voter registration lists, the U.S. Census American Community Survey, and the U.S. Census Current Population Survey, as well as 2020 Presidential vote, state regions, and voter turnout. Respondents were selected from YouGov to be representative of registered voters in Minnesota. The weights range from 0.13 to 6.03 with a mean of 1 and a standard deviation of 0.71.

The margin of error (a 95% confidence interval) for a sample percentage p based upon the subsetting sample is approximately 4.2%. It is calculated using the formula:

$$\hat{p} \pm 100 \times \sqrt{\frac{1 + CV^2}{n}}$$

where CV is the coefficient of variation of the sample weights and n is the sample size used to compute the proportion. This is a measure of sampling error (the average of all estimates obtained using the same sample selection and weighting procedures repeatedly). The sample estimate should differ from its expected value by less than margin of error in 95 percent of all samples. It does not reflect non-sampling errors, including potential selection bias in panel participation or in response to a particular survey.
